

## Christmas wooden star

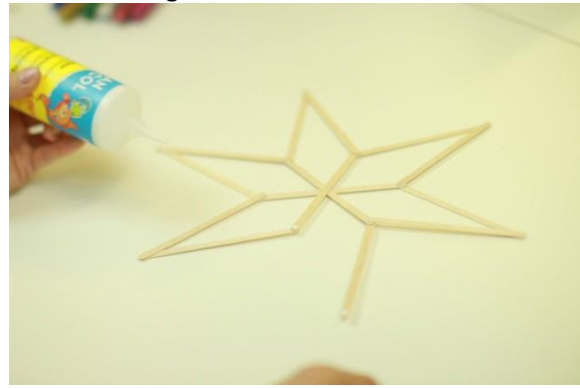

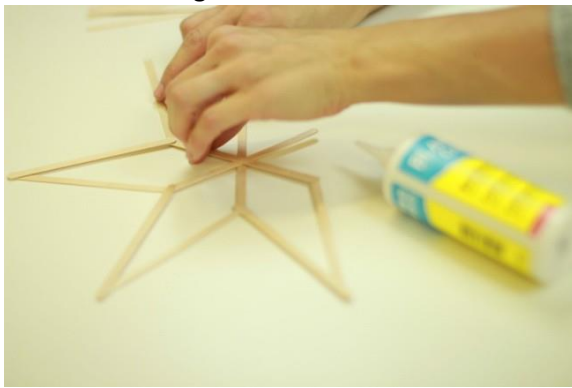

Material required:

- 15 wooden sticks
- fine fir branches
- string
- BLANCOL craft glue
- BLANCOL Glitter Glue Classic

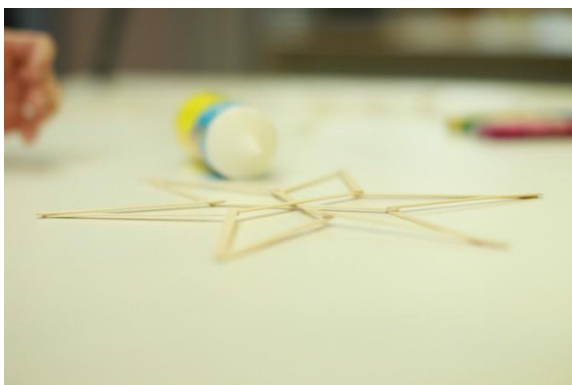

1. Take three wooden sticks and glue their centers to each other with a dab of BLANCOL craft glue so that six even spaces are created. The wooden sticks will then look like a small star.

2. After the glue has dried, you can take another stick and put a generous dab of craft glue on its two ends. Then glue one end under one end of the star. Dab a little glue on the star end next to it.

3. Now take another wooden stick without glue and connect the star end with the star end. And you already have the first prong of your Christmas wooden star. Now repeat this procedure until all six points are finished.

4. After your wooden star is glued, you can decorate it with fine fir branches, BLANCOL Glitter Glue Classic or other craft materials for Christmas.
